Linear Light Sensor

TYPE:LLS05-A

SENBA OPTICAL ELECTRONIC CO., LTD.

LLS05-A

Production Specification

- Replacement of CdS
- RoHS Compliant / Pb-free / Cd-free
- Linear Output Type Light Sensor

■ TYPICAL APPLICATIONS

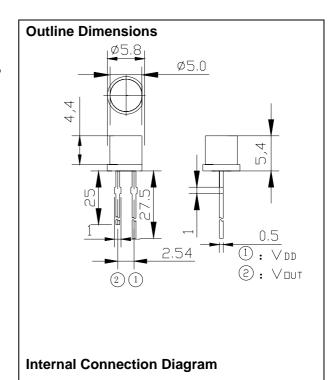

- Replacement of Photoresistor (CdS).
- Control of backlight brightness for LCD Monitors,TV sets, PDA ,Cameras and Mobile Phones.
- · Switch for lighting equipments and Toys.
- · Testing for daylight.

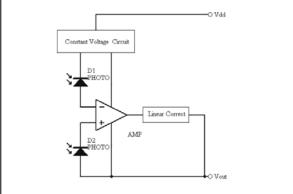

■ FEATURES

- · Linear output conforming to illuminance.
- Built-in optical filter for spectral response similar to that of the human eye.
- · High Gain Photocurrent Amplifiers IC
- Temperature Stable.
- · Low dark current and Low working Lux.
- RoHS Compliant / Pb-free / Cd-free.

■ FUNCTIONAL PIN DESCRIPTION

Item	Description		
V _{DD}	Positive Terminal		
V _{OUT}	Negative Terminal		

■ MAXIMUM RATINGS (Ta= 25°C)

Characteristics	Symbol	Rating	Unit
Supply voltage	V_{DD}	-0.5 to 7	V
Output voltage	V _{OUT}	\leq V _{DD}	V
Permissible power dissipation	Р	70	mW
Operating temperature range	T _{opr}	-30 to 85	°C
Storage temperature range	T _{stg}	-40 to 100	°C
Soldering temperature range (10 s)	T _{sol}	260	°C

■ ELECTRICAL AND OPTICAL CHARACTERISTICS (Ta= 25°C)

Param	eter	Symbol	Test Conditions	Min	Туре	Max	Unit
Peak Spectral F	Response	λ_{PR}			550		nm
Photocurrent (1	1)	I _L (1)	V _{CC} =5V, E _V =5Lux	2.0	2.5	2.8	uA
Photocurrent (2	2)	I _L (2)	V _{CC} =5V, E _V =10Lux	5.40	8.23	8.70	uA
Photocurrent (3	3)	I _L (3)	V _{CC} =5V, E _V =100Lux	91.0	114.0	158.0	uA
Dark Current		I _{DD(DARK)}	V _{CC} =5V, Ev=0Lux		10		nA
Linear Respons	se Range	Ev		1-200		Lux	
Switching	Rise time	tr	\/a==5\/_Daa=40\/_0	8.5		ms	
Time	Fall time	tf	Vcc=5V, Rss=10k Ω	8.5			

Note: Output capacitance has an effect on switch time.

The white LED is regarded as light source.

■ TEST SCHEMATIC CIRCUITS

■ APPLICATION EXAMPLES

Automatic Night Light Figure 6.

This circuit show the LLS05-A in an Automatic Night Light . The Lamp current is switched by a sensitive gate SCR. The I_{gate} (Type) of the SCR(Silicon Controlled Rectifier) should be less than 10uA. When the light is above threshold, current flows between the V_{DD} and V_{OUT} pins of the IC which diverts current away from the gate of the SCR. The light switching threshold can be adjusted by choosing different values for R2 and R3.

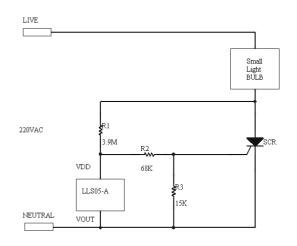

Figure 6

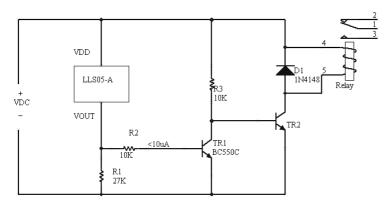

Figure 7

Relay Drivers Figure 7.

The relay coil is energised when the light < Slux(threshold). The Slux (threshold) is set by R1. For battery operated circuits, the h_{fe} of TR2 should be high to allow a high value for R3. The h_{fe} of TR1 should be high so that a low base current will be able to pull R3 down.

Interface Circuit Examples Figure 8 & Figure 9

Figure 8. This circuit uses a comparator (or Amp) to provide a level switching interface for the LLS05-A. Out will be high when the voltage at $V_{OUT} < 0.1*V_{DD}$.

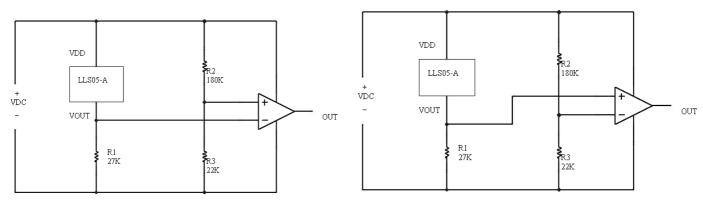

Figure 8 Figure 8 except that out will be high when the voltage $V_{OUT} > 0.1*V_{DD}$

CAUTIONS FOR USE

- Do not use the sensors under conditions that exceed the range of its specifications.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- CMOS IC is contained, so static electricity should be avoided.
- ♦ Be sure to perform soldering at values within the maximum ratings. Take care so that no external force is applied to the lead during and immediately after soldering. Do not perform reflow soldering.
- ♦ The product is compliant with ECC RoHS.
- ♦ The photocurrent will be influenced if the dirty or destroy on the surface.
- ♦ The sensors are small, transparent, plastic packages. They are sensitive to moisture and come in sealed, moisture proof packages.
- ◆ Small packing for 1000PCS, Big packing for 10000PCS.
