## 1. Introduction

This is a Prototype Shield with a mini breadboard which can be used with Arduino® MEGA2560 or MEGA 1280 boards compatible boards.

It is great for development and prototyping small circuits. It features two onboard LEDs, a reset switch, stackable headers and a breadboard.

This board along with breadboard can be mounted directly on top of the Arduino® MEGA2560 or MEGA 1280 hardware.

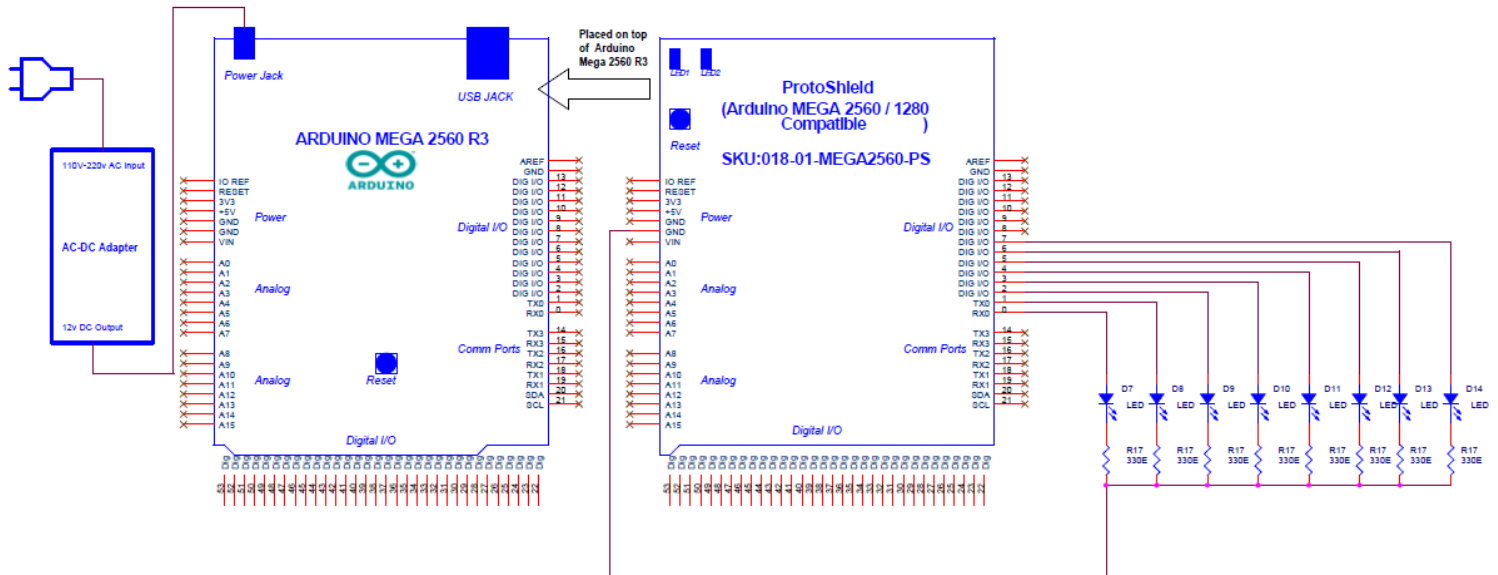

## 2. Technical Specification

- Arduino Mega 2560 Prototype Shield
- 2 general LEDs
- A reset switch
- Mini Breadboard with self-adhesive tape on the back, easy to stick on the Arduino Mega Prototype Shield
- No soldering required.

### 3. Application Circuit

Here is an example circuit of the prototype-shield + mini breadboard with running lights, controlled by an Arduino® MEGA2560 or MEGA 1280.

#### 8 Running LED Application for Proto Shield (Arduino MEGA 2560 / 1280 Compatible)

The application example is for 8 Running LEDs mounted on mini bread board and wired to the board. The code sample given will control the LEDs to create the running effect.

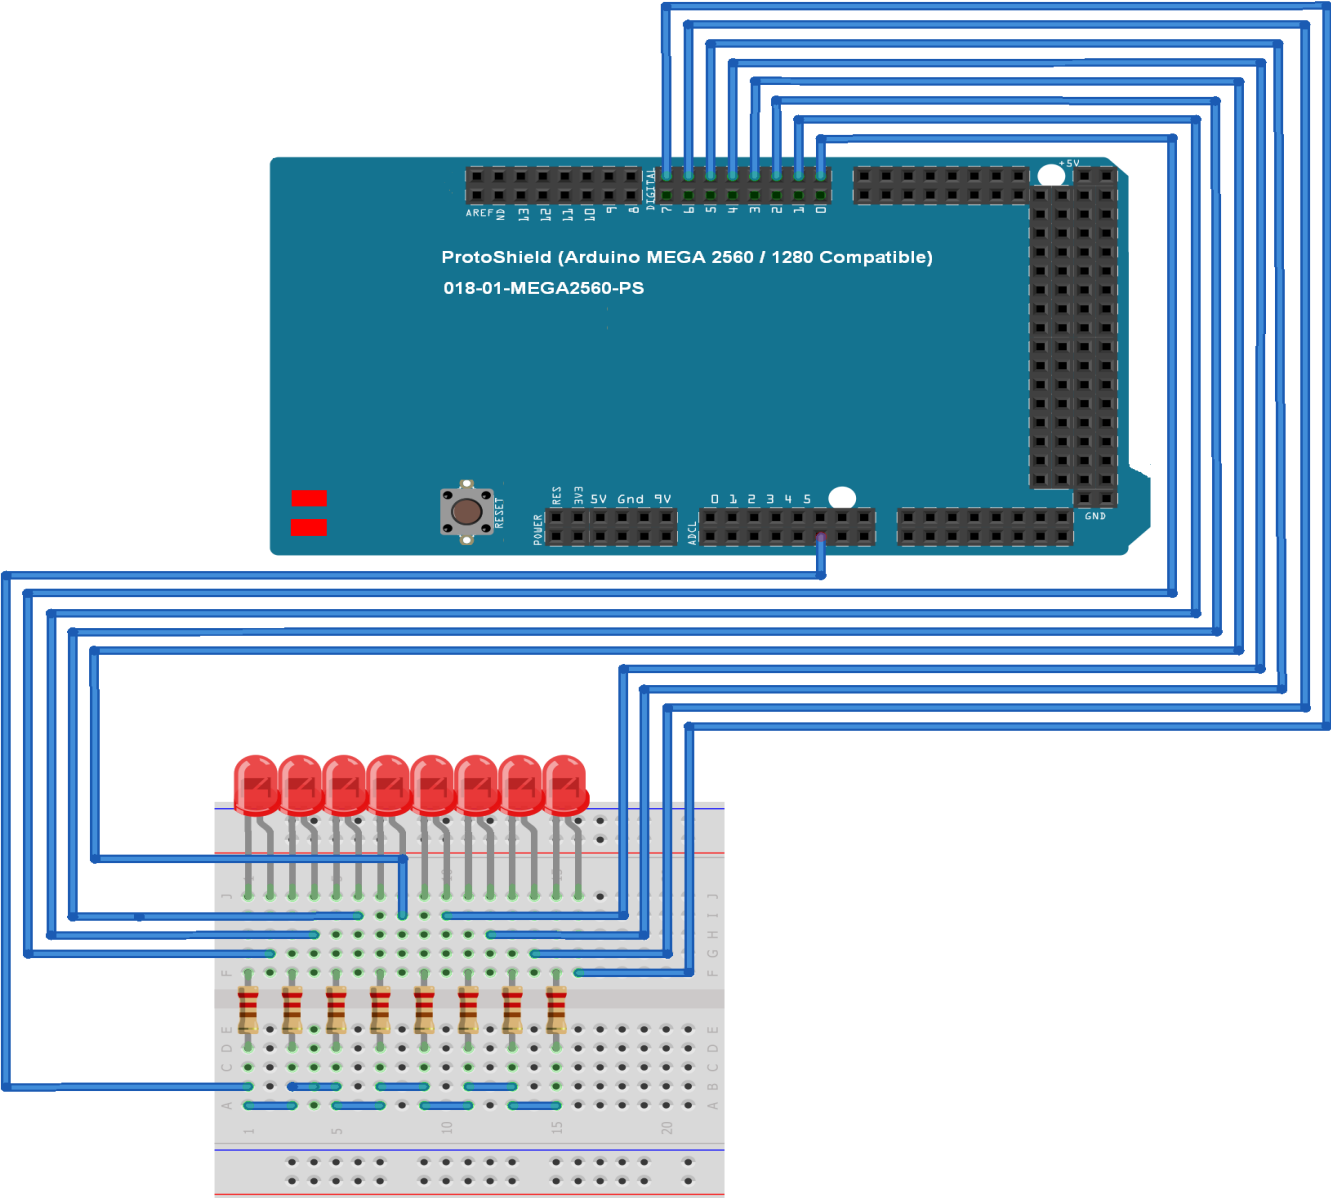

#### *Using Mini-Breadboard for the wiring the 8-LED running lights.*

**Solder less Breadboard Jumper Cable Wires** are needed for wiring up the circuit on the Mini-Breadboard. These are available at

<https://core-electronics.com.au/store/index.php/prototyping/wire/breadboard-jumper-cable-wires-65-pack.html>

The wiring of the 8 LEDS and 8 resistors to the proto-shield + mini breadboard is shown below.

ProtoShield (Arduino MEGA 2560 /1280 Compatible) (SKU: 018-01-MEGA2560-PS)

## 4. Getting Started

### Getting Started With Arduino® Uno Board

This section explains how to connect your Arduino® board to the computer and upload your first sketch. Link is provided for detailed procedure of the Arduino® website as below.

- [1 Get an Arduino® board and USB cable](#)
- [2 Download the Arduino® environment](#)
- [3 Connect the Board as shown in the Application circuit](#)
- [4 Install the drivers](#)
- [5 Launch the Arduino® application](#)
- [6 Open the code example](#) (which is shown below)
- [7 Select your board](#)
- [8 Select your serial port](#)
- [9 Upload the program](#)

After upload the sample program you can see the LEDs running from left to right. The speed of running can be adjusted by increasing or decreasing the value.

## 5. Example Code

### Code Example for Arduino®

```
/*  
Prototype Shield + Mini board for Arduino®  
Mini-bread boards Circuit wiring for 8 Running LEDs ON OFF  
sequential Operation.  
The code example will switch On one by one LEDs in forward and  
reverse directions. Speed can be adjusted by the delay time  
parameter.  
ProtoShield (Arduino MEGA 2560 / 1280 Compatible) is available  
from:
```

<https://core-electronics.com.au/store/index.php/arduino-mega-2560-1280-r3-protoshield.html>

```
The circuit connected as  
LED1: First LED  
LED2: Second LED  
LED3: Third LED  
LED4: Forth LED  
LED5: Fifth LED  
LED6: Sixth LED  
LED7: Seventh LED  
LED8: Eighth LED  
created 02 Jun 2013  
This example code is in the public domain.
```

## ProtoShield (Arduino MEGA 2560 /1280 Compatible) (SKU: 018-01-MEGA2560-PS)

```
*/  
// These constants describe the pins which switch LED.  
const int LED1 = 0;      // LED1 connected PIN of Ardiono

{  
  // The LEDs are ON here  
  digitalWrite(LED1, HIGH);  
  digitalWrite(LED8, LOW);  
}
```

## ProtoShield (Arduino MEGA 2560 /1280 Compatible) (SKU: 018-01-MEGA2560-PS)

```
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);
// The LEDs are ON here
digitalWrite(LED2, HIGH);
digitalWrite(LED1, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);
// The LEDs are ON here
digitalWrite(LED3, HIGH);
digitalWrite(LED2, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

// The LEDs are ON here
digitalWrite(LED4, HIGH);
digitalWrite(LED3, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

// The LEDs are ON here
digitalWrite(LED5, HIGH);
digitalWrite(LED4, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

// The LEDs are ON here
digitalWrite(LED6, HIGH);
digitalWrite(LED5, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

// The LEDs are ON here
digitalWrite(LED7, HIGH);
digitalWrite(LED6, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

// The LEDs are ON here
digitalWrite(LED8, HIGH);
digitalWrite(LED7, LOW);
// delay_ms secs delay before next LED On OFF operation:
delay(delay_ms);

}
```

## 6. Reader Feedback

Have a suggestion or discovered an error? Let us know and we will fix it! Please contact us via [manuals@core-electronics.com.au](mailto:manuals@core-electronics.com.au) and mention the product SKU and your feedback in the message.
